
Meeting of the Technical Steering Committee (TSC) Board

Wednesday, January 16th, 2019
11:00am ET

Meeting Logistics

- https://zoom.us/j/556149142

- United States : +1 (646) 558-8656
  - Meeting ID: 556 149 142

Antitrust Policy Notice

- Linux Foundation meetings involve participation by industry competitors, and it is the intention of the Linux Foundation to conduct all of its activities in accordance with applicable antitrust and competition laws. It is therefore extremely important that attendees adhere to meeting agendas, and be aware of, and not participate in, any activities that are prohibited under applicable US state, federal or foreign antitrust and competition laws.

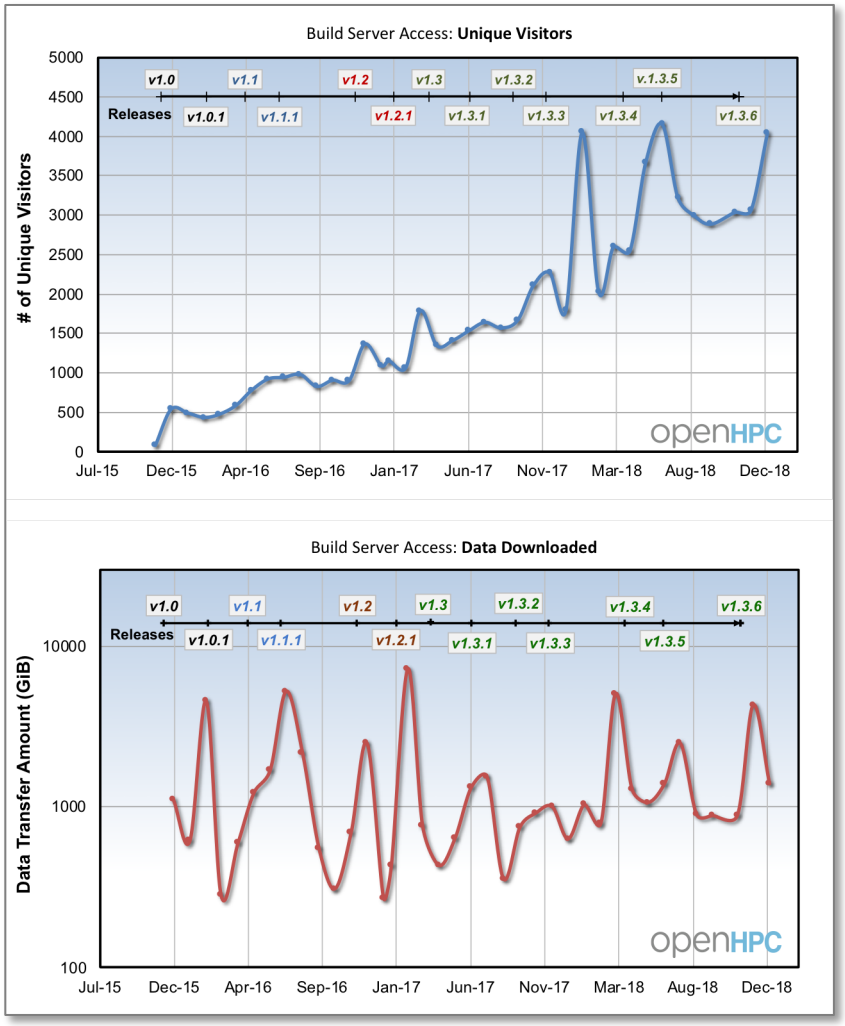
- Examples of types of actions that are prohibited at Linux Foundation meetings and in connection with Linux Foundation activities are described in the Linux Foundation Antitrust Policy available at http://www.linuxfoundation.org/antitrust-policy. If you have questions about these matters, please contact your company counsel, or if you are a member of the Linux Foundation, feel free to contact Andrew Updegrove of the firm of Gesmer Updegrove LLP, which provides legal counsel to the Linux Foundation.

THE LINUX FOUNDATION

Agenda

- CI update
  - centos7.6 image for x86 is now available (tested with previous ohpc 1.3.6 release)
  - working on aarch64
- Upcoming submission deadlines:
  - PEARC'19 tutorial (Feb20)
  - ISC'19 BoF (Feb 20)
- Year end usage stats
- Review cycle #7
- RHEL8 patches (Adrian)
- Discussion on next major distro versions
  - SLE12
  - RHEL8/CentOs8

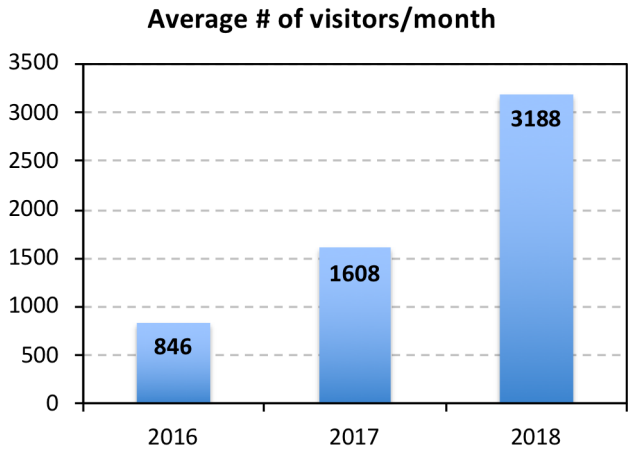
Updated Usage/Access Statistics (thru 2018)



- Stats for build/repo server (tracking # of unique visitors per month and amount of data downloaded):

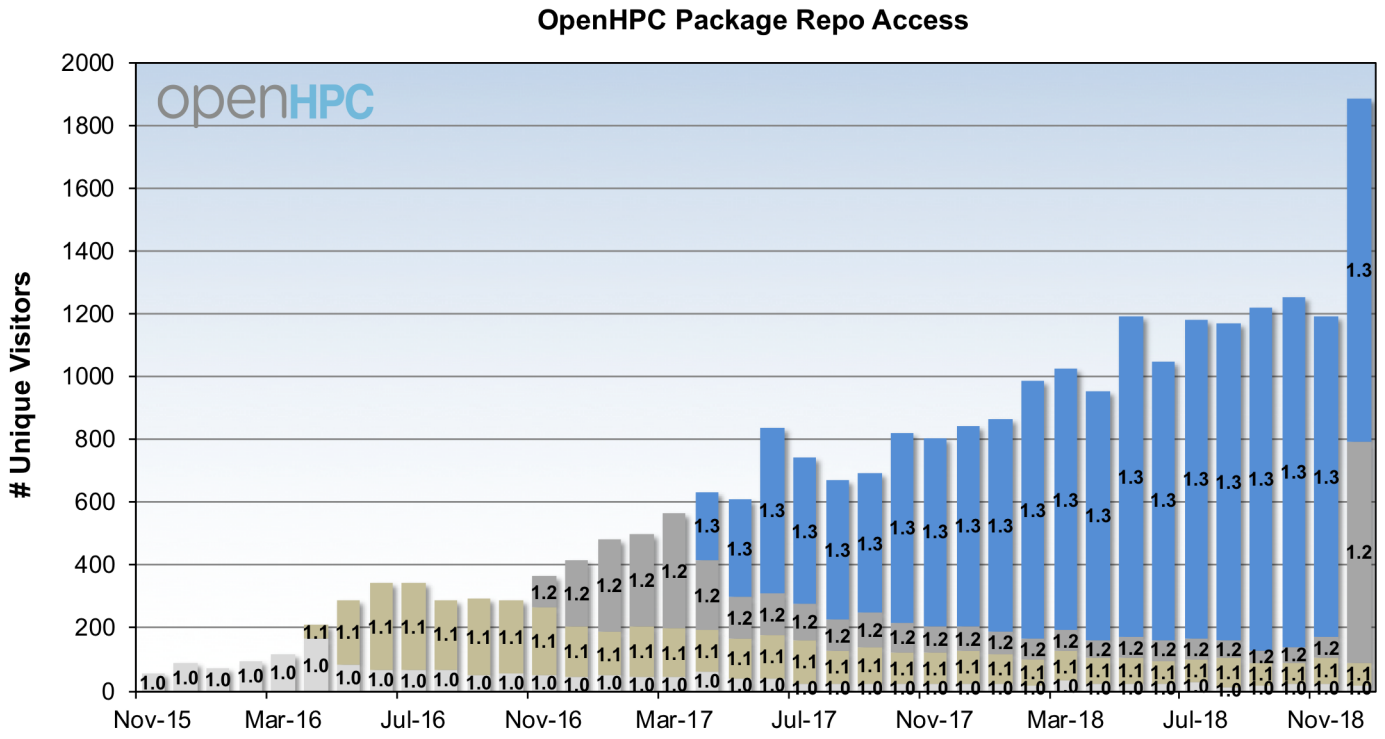
  http://build.openhpc.community

- ~21.4 TB downloaded in 2018



Updated Usage/Access Stats (thru 2018)

- These stats monitor access specifically to package repository metadata (typically expected to be via yum/zypper)
- Repo access binned by minor version



Review cycle #7

Component Name	# of Reviewers	# of accepts	# of rejects	Avg. Priority
buildtest	5	4	1	5.2

- Looks fairly simply to integrate, but will ask for help from developer for implementing test in our test harness
  - will add this as new component for backlog
- Have one new submission for review cycle #8 at the moment
  - will follow up on getting review volunteers next time

RHEL8 patches (Adrian)

- https://github.com/openhpc/ohpc/pull/877
  - rhel8 using **annobin** which adds annotations to binaries
  - can be disabled for C code
  - problem with Python modules
    - python from distro requires annobin and is not easy to disable

Next major distro versions

- RHEL8 beta is out
- SLES15 is now out
  - recall from previous TSC discussion last year that the direction suggested for SLES was to wait till SLES15 SP1 was released and target that version for ohpc update
- Don't know if we will want to do the same for RHEL or not (e.g wait for 8.1)?
  - the very original ohpc release targeted CentOS 7.1
- Regardless, we will presumably be rolling out ohpc support for new major distro releases this year
  - need to talk about expectations regarding versioning and support of previous distro versions

Next major distro versions

- Current convention we iterated to after experiences with 1.0 thru 1.2 releases is to stay on a minor branch version for longer
  - 1.3.0, 1.3.1, 1.3.2, 1.3.3, ...etc
  - update against underlying distro minor variant periodically since end-users can upgrade between them (e.g. CentOS7.4 -> CentOS 7.5 -> CentOS 7.6)
    - only rebuilding packages with version changes, bug fixes or new components for each micro release
  - since users can't generally upgrade across major OS variant boundaries (e.g. SLE 12 -> SLE 15, or CentOS7 -> CentOS8), assumption was that we would introduce support with a new ohpc minor release (a la ohpc v1.4)
- We haven't really discussed a policy around support for previous variants:
  - option 1: roll out builds for newer distro versions and stop updating components in older versions
    - e.g. SLE12 SP1 rolled out in ohpc v1.4.0
    - no updates for SLES in ohpc v1.3.x, only updates for CentOS7
    - introduce CentOS8.1 in ohpc v1.4.1, then ohpc v.1.3.x tree is frozen with no more updates
  - option 2(a-d): roll out builds for newer distro versions in ohpc v1.4.0 and maintain some elements of support in ohpc v1.3.x for previous distro versions for some amount of time
    - 2a: only critical bug/security issues for v1.3.x
    - 2b: 2a + existing component version updates for v1.3.x
    - 2c: 2a + 2b + add new components as well
    - if considering any of the above, what is a reasonable timeframe to maintain?
  - option 3?:
